

### Fund Overview

Base Currency for Fund	GBP
Total Net Assets (GBP)	24 million
Fund Inception Date	28.02.2018
Number of Holdings	221
Benchmark	LIBOR 90 Day (GBP) Index
IA Sector	N/A
Distribution Yield	2.23%
ISA Status	Yes

### Summary of Investment Objective

The Fund aims to provide an absolute return (through a combination of income and capital growth) each calendar year. In addition, the Fund aims to provide an overall return of 2-3% above the London Interbank Offered Rate (LIBOR) 90 Day (GBP) over a full market cycle (being 3-5 years) after management fees are deducted.

### Fund Management

David Yuen, CFA: United States  
Michael Materasso: United States

### Asset Allocation (Market Value)

CMBS	5.47	Philippine Peso	-0.36
Interest-Rate Derivatives	-26.77	Canadian Dollar	-0.48
Cash & Cash Equivalents	6.07	Australian Dollar	-0.68
Others	10.67	Others	-0.26

## Portfolio Data Derivatives Disclosures

Market value figures reflect the trading value of the investments. Notional exposure figures are intended to estimate the portfolio's exposure, including any hedged or increased exposure through certain derivatives held in the portfolio (or their underlying reference assets). Interest Rate Derivatives sector consists of Treasury, interest rate and other derivatives that are primarily used for duration management. Average Credit Quality figures are intended to estimate the portfolio's exposure to issuer credit risk, including any hedged or increased exposure through credit derivatives held in the portfolio (or their underlying reference assets). Any credit derivatives are assigned the ratings of their underlying reference assets. Average Duration, Average Weighted Maturity and Yield to Maturity reflect certain derivatives held in the portfolio (or their underlying reference assets). Portfolio breakdown percentages may not total 100% and may be negative due to rounding, use of any derivatives, unsettled trades or other factors.

## What are the Key Risks?

The value of shares in the Fund and income received from it can go down as well as up and investors may not get back the full amount invested.

Performance may also be affected by currency fluctuations. Currency fluctuations may affect the value of overseas investments.

There is no guarantee that the Fund will meet its objective.

The Fund invests mainly in debt securities issued by government, government-related or corporate entities worldwide and in derivatives. Such securities and derivatives have historically been subject to price movements, generally due to interest rates, foreign exchange rates or movements in the bond market. As a result, the performance of the Fund can fluctuate over time.

Other significant risks include: currency risk, derivatives risk, liquidity risk, emerging markets risk, targeted return risk, mortgage and asset-backed securities risk.

For full details of all of the risks applicable to this Fund, please refer to the "Risk Factors" section of the Fund in the current prospectus of Franklin Templeton Funds.

## Glossary

**Average Credit Quality:** The average credit quality reflects the holdings of the underlying issues, based on the size of each holding and ratings assigned to each based on rating agency assessments of its creditworthiness.

**Average Duration:** Also known as 'effective' or 'Macaulay' duration it is a measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years. It's an indication of an issue's coupon relative to its maturity. Rising interest rates mean falling bond prices; declining interest rates mean rising bond prices. The bigger the duration number, the greater the interest-rate risk; (or reward for bond prices). The weighted average duration of a fund reflects the effective duration of the underlying issues, based on the size of each holding. This value differs with 'Modified Duration' which is modified for the market (dirty) price of an issue.

**Average Weighted Maturity:** An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings.

**Yield to Maturity:** Yield to Maturity (YTM) also known as the 'Gross Redemption Yield' or 'Redemption Yield'. The rate of return anticipated on a bond if it is held until the maturity date. YTM is considered a long-term bond yield expressed as an annual rate. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity. It is also assumed that all coupons are reinvested at the same rate.

## Important Information

Given the variety of investment options available today, we suggest investors seek guidance from a Financial Adviser.

**Fund Overview: The Distribution Yield** reflects the amounts that may be expected to be distributed over the next 12 months as a percentage of the mid-market unit price of the fund as at the date shown. It does not include any preliminary charge and investors may be subject to tax on distributions.

**Fund Management:** CFA® and Chartered Financial Analyst® are trademarks owned by CFA Institute.

**Fund Measures:** The average credit quality (ACQ) rating may change over time. The portfolio itself has not been rated by an independent rating agency. The letter rating, which may be based on bond ratings from different agencies (or internal ratings for unrated bonds, cash and equivalents), is provided to indicate the average credit rating of the portfolio's underlying investments and generally ranges from AAA (highest) to D (lowest). For unrated bonds, cash and equivalents, ratings may be assigned based on the ratings of the issuer, the ratings of the underlying holdings of a pooled investment vehicle, or other relevant factors. The ACQ is determined by assigning a sequential integer to all credit ratings AAA to D, taking a simple, asset-weighted average of investments by market value and rounding to the nearest rating. The risk of default increases as a bond's rating decreases, so the ACQ provided is not a statistical measurement of the portfolio's default risk because a simple, weighted average does not measure the increasing level of risk from lower-rated bonds. The ACQ may be lower if cash and equivalents are excluded from the calculation. The ACQ is provided for informational purposes only.

**Ongoing Charges:** The Ongoing Charges Figure (OCF) is an amount representing all operating charges and expenses of the Fund in the prior 12 months as a percentage of the Fund's average net assets for the period. Where that figure would not be a fair representation of future costs or if 12 months data is not available, an estimated figure will be shown.

Performance attribution is calculated in the base currency of the fund.
