Investment Overview

To seek long-term and stable investment growth, through a combination of income and growth of capital (total return), from a portfolio of global infrastructure securities. The Fund mainly invests in equity and equity related securities of companies in infrastructure sectors, such as utilities, transport, community and social infrastructure, and communications. These investments may be from anywhere in the world, including China and other emerging markets.

Past performance does not predict future returns.

What are the Risks?

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested. The Fund is subject to the following risks which are materially relevant: **Concentrated fund:** The fund invests in fewer companies than other funds which invest in shares usually do. This means that the fund does not spread its risk as widely as other funds and will therefore be affected more if an individual company has significant losses. **Derivatives:** The use of derivatives can result in greater fluctuations of the fund's value and may cause the fund to lose as much as or more than the amount invested. **Emerging markets investment:** The fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries. **Fund operations:** The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries. **Hedging:** The fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the fund and base currency of the fund itself (hedging). However, hedging transactions can also expose the fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the fund. **Investment in China:** The fund invests in China and is subject to the risk of significant change in political, social or economic policy in China, which may negatively affect the value of such investments. **Investment in company shares:** The fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company, its industry or the economy in which it operates. **Investment in infrastructure:** The fund invests in shares of infrastructure companies, and the value of these shares can be negatively affected by economic or regulatory occurrences affecting their industries. Investments in new infrastructure projects carry risks where they may not be completed within the budget, agreed timeframe or specifications. Operational and supply disruptions can also have a negative effect on the value of the company's shares. **Sustainability:** The fund's integration of sustainability risks in the investment decision process may have the effect of excluding profitable investments from the investment universe of the fund and may also cause the fund to sell investments that will continue to perform well. A sustainability risk could materialise due to an environmental, social or governance event or condition which may impact the fund's investments and negatively affect the returns of the fund. Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

Glossary

Ongoing Charges Figure (OCF): The Ongoing Charges Figure (OCF) includes the fees paid to the management company, the investment manager and the depository, as well as certain other expenses. The OCF is calculated by taking the relevant main material costs paid out over the 12-month period indicated and dividing them by the average net assets over the same period. The OCF does not include all expenses paid by the fund (for example, it does not include what the fund pays for buying and selling securities). For a comprehensive list of the types of costs deducted from fund assets, see the prospectus. For recent all-in annual costs, as well as hypothetical performance scenarios that show the effects that different levels of return could have on an investment in the fund, where applicable, see the KIID. **Comparator:** Benchmark is used for comparing Fund performance, but is not a constraint to Fund Investment. **Weighted Average Market Capitalization:** A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share. For a portfolio, the value represents a weighted average based on the stocks held. **Price to Earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds. **Standard Deviation:** Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.
